

### **ABSTRACT OF THE DISCLOSURE**

5 A light emitting diode (LED) warning signal light, the warning signal light  
comprising a plurality of light sources constructed and arranged with a reflector or  
cullminator, the LED light source being in electrical communication with a controller  
and a power supply, battery, or other electrical source. The warning signal light provides  
various colored light signals for independent use or use by an emergency vehicle. These  
light signals may include a strobe light, revolving light, an alternating light, a flashing  
light, a modulated light, a pulsating light, an oscillating light or any combination thereof.  
10 Additionally, the warning signal light may be capable of displaying symbols, reverse  
characters, or arrows. The controller may further be adapted to regulate or modulate the  
power intensity exposed to the illuminated LED's to create a variable intensity light  
signal.
